To practice Problem-Solving Strategy 15.2 Standing Waves. In lab, your instructor generates a standing wave using a thin string of length LLL\_1 = 1.20 mm fixed at both ends. You are told that the standing wave is produced by the superposition of traveling and reflected waves, where the incident traveling waves propagate in the + x direction with an amplitude AAA\_1 = 2.35 mmmm and a speed vxxvx\_x1 = 11.5 m/sm/s .

Note that the final answer has the proper SI unit of momentum (kg x m/s) after it and it also mentions the direction of the movement. 2. A cannon ball weighing 35kg is shot from a cannon towards the east at 220m/s, calculate the momentum of the cannon ball. Formula - P= kg x m/s = 35kg x 220m/s = 7700 kg x m/s east

C) 45 D) 15; Answer:- n(H U E) = 60, n(H) = 45, n(H n E) = 25. n(H U E) = n(H) + n(E) - n(H n E) So total numbers of people who speak only English = 60 = 45 + n(E) - 25 = 40 - 25 = 15. So option number (D) is right. Set Theory Practice Questions And Answers
