Leave space between each topic so you can add to the notes during in-class lectures. Ch. 19.1 The Fossil ...

Ch. 19.1 The Fossil Record

Paleontology is the study of the history of life on Earth. It looks at fossils, which are the preserved remains of plants, animals, and other living things. Fossils are mainly formed in two ways. In one case, animal or plant matter is replaced by rock over time, but the remains still keep their original shape.

Paleontology | National Geographic Society

A fossil record is a group of fossils which has been analyzed and arranged chronologically and in taxonomic order. Fossils are created when organisms die, are incased in dirt and rock, and are slowly replaced by minerals over time. What is left is a mineral impression of an animal which once existed.

Fossil Record - Definition and Examples | Biology Dictionary

Fossils are the preserved remains of plants or animals that are more than 10,000 years old. Individual fossils can tell us a lot, but a fossil record, the entire collection of fossils of a living...

Fossil Record: Lesson for Kids | Study.com

The study of the fossil record has provided important information for at least four different purposes. The progressive changes observed within an animal group are used to describe the evolution of that group. Fossils also provide the geologist a quick and easy way of assigning a relative age to the strata in which they occur.

fossil | Definition, Types, Examples, & Facts | Britannica

The fossil record is a rich archive of organisms that have gone extinct and exhibit morphological characteristics often extremely different from what we are used to in the modern world. It is also evident, however, that many fossil creatures have body plans that can readily be associated with basic structural plans still observed today.
