amqp - Python AMQP low-level client library — py-amqp 2.4 ...

AMQP is a framing and transfer protocol. Framing means that it provides structure for binary data streams that flow in either direction of a network connection. The structure provides delineation for distinct blocks of data, called frames, to be exchanged between the connected parties.

AMQP 1.0 in Azure Service Bus and Event Hubs protocol ...

This document defines a networking protocol, the Advanced Message Queuing Protocol (AMQP), which enables conforming client applications to communicate with conforming messaging middleware servers.

Advanced Message Queuing Protocol Specification

The Advanced Message Queuing Protocol (AMQP) is an open internet protocol for business messaging. It defines a binary wire-level protocol that allows for the reliable exchange of business messages between two parties. AMQP has a layered architecture and the specification is organized as a set of parts that reflects that architecture.

OASIS Advanced Message Queuing Protocol (AMQP) Version 1

See this presentation to learn more about AMQP and its value. Advanced Message Queuing Protocol 1.0 becomes OASIS Standard Click above for the press release.

Home | AMQP

AMQP relies on heartbeat feature to make sure consumer is still there. Basically consumer is expected to send heartbeat frames from time to time to RabbitMQ broker so the broker does not close the connection. It is not possible to implement heartbeat feature in PHP, due to its synchronous nature.

AMQP Lib | enqueue-dev

The Advanced Message Queuing Protocol (AMQP) is an open internet protocol for business messaging. AMQP defines links as a unidirectional transport for messages between a source and a target. The target of a link identifies the node to which messages are to be sent to.

Using the AMQP Anonymous Terminus for Message Routing ...

Queues ¶ class celery.app.amqp.Queues (queues = None, default_exchange = None, create_missing = True, ha_policy = None, autoexchange = None, max_priority = None, default_routing_key = None) [source] ¶. Queue name⇒ declaration mapping. Parameters. queues (Iterable) - Initial list/tuple or dict of queues.. create_missing - By default any unknown queues will be added automatically, but if ...

AMQP — Celery 5.0.0 documentation

The Advanced Message Queuing Protocol (AMQP) is an open and standardized internet protocol for reliably passing messages between applications or organizations.

Apache.NMS.AMQP - ActiveMQ

librabbimq is installed and discoverable in your environment so php-amqp extension can load it. php-amqp extension present in system (find amqp.so or amqp.dll if you are on windows), it is loaded (php --ri amqp produced some info), and there are no underlying abstraction that MAY emulate php-amqp work. You hav correct RabbitMQ credentials.
