202 analysing costs and revenues tutorial Contribution can be calculated on a per unit basis (as here), or for a batch of output (eg 1,000 units), or for a whole business. It follows that the difference between the sales revenue and the variable costs of the units sold in a period is the total contribution that the sales of all the

7 Marginal and absorption costing

A cost benefit analysis (also known as a benefit cost analysis) is a process by which organizations can analyze decisions, systems or projects, or determine a value for intangibles. The model is built by identifying the benefits of an action as well as the associated costs, and subtracting the costs from benefits.

Using the coefficients from the table, we can forecast the revenue given the promotion cost and advertising cost. For example, if we expect the promotion cost to be 125 and advertising cost to be 250, we can use the equation in cell B20 to forecast revenue: $=\$B\$25 + (B18 * \$B\$26) + (B19 * \$B\$27)$.
