Preface. Since we published Sectional Anatomy: PET/CT and SPECT/CT in 2007, there has been a significant increase in the use of hybrid imaging in clinical practice and also reports of higher sensitivity and specificity than those of the single imaging modality, thus making the integrated approach a more accurate imaging test.

We have constructed a three-dimensional (3D) whole body mouse atlas from coregistered x-ray CT and cryosection data of a normal nude male mouse. High quality PET, x-ray CT and cryosection images were acquired post mortem from a single mouse placed in a stereotactic frame with fiducial markers visible in all three modalities.
