Calculus usually starts out with the study of limits, which can be quite frightening and confusing. This is because we need limits to "understand" the foundation of Differential Calculus; we need to "appreciate" the math before we plug away at doing it much easier. Let's plug through limits as well as we can!

1.1 Velocity and Distance. The first step in calculus (in my opinion) is to begin working with junctions. The functions can be described by formulas or by graphs. The first graphs to study are straight lines, and the functions that go with them are linear: $y = mx + b$ or (using other letters) $f = vt + C$.
