Heart disease is often thought to be more of a problem for men. However, it's the most common cause of death for both women and men in the United States. Because some heart disease symptoms in women can differ from those in men, women often don't know what to look for.

Heart disease in women: Understand symptoms and risk ...

Heart changes cause the ECG of a normal, healthy older person to be slightly different than the ECG of a healthy younger adult. Abnormal rhythms (arrhythmias), such as atrial fibrillation, are more common in older people. They may be caused by heart disease. Normal changes in the heart include deposits of the "aging pigment," lipofuscin. The heart muscle cells degenerate slightly.
