Descriptive Statistics and Frequency Distributions This chapter is about describing populations and samples, a subject known as descriptive statistics. This will all make more sense if you keep in mind that the information you want to produce is a description of the population or sample as a whole, not a description of one member of the population.

2.8 Remember to look at your data. Descriptive statistics are great and we will use them a lot in the course to describe data. You may suspect that descriptive statistics also have some short-comings. This is very true. They are compressed summaries of large piles of numbers. They will almost always be unable to represent all of the numbers fairly.

Chapter 2 Describing Data | Answering questions with data

2.1.2 Inferential statistics • Inferential statistics consists of methods of drawing and measuring the reliability of con-clusions about a population based on information obtained from a sample of the popula-tion. • Population and sample are important definitions in statistics. – A population is the collection of all individuals of items under consideration in a statistical study.
