The first method of counting has been argued to be counting on fingers. [better source needed] This evolved into sign language for the hand-to-eye-to-elbow communication of numbers which, while not writing, gave way to written numbers. Tallies made by carving notches in wood, bone, and stone were used for at least forty thousand years. These tally marks may have been used for counting elapsed ...

They originated in India in the 6th or 7th century and were introduced to Europe through the writings of Middle Eastern mathematicians, especially al-Khwarizmi and al-Kindi, about the 12th century.

They represented a profound break with previous methods of counting, such as the abacus, and paved the way for the development of algebra.

## **Hindu-Arabic numerals | History & Facts | Britannica**

Counting is the process of determining the number of elements of a finite set of objects. The traditional way of counting consists of continually increasing a (mental or spoken) counter by a unit for every element of the set, in some order, while marking (or displacing) those elements to avoid visiting the same element more than once, until no
