TDS - Dental Materials and Their Selection

biocompatible A material is considered biocompatible if it does not produce harmful or toxic reactions in the tissues it contacts or adverse systemic reactions as a result of elements, ions, and/or compounds it releases. biomaterial A material that is designed to be implanted in the body for the repair or replacement of a dis - eased or damaged ...

DentalMaterials andTheirSelection

Understanding the effect of stress concentration is the key to understanding the failure of brittle materials, such as ceramics, which influences their selection as dental materials and dictates the design of restorations fabricated from these materials. The tendency for ceramics to fail in a brittle manner at stresses that are far below the theoretical strengths of these materials can be understood in light of the concept of stress concentration at surface scratches and other defects.

Dental material & their selection 2002 - SlideShare

Dental impressions are negative imprints of teeth and oral soft tissues from which a positive representation can be cast. They are used in prosthodontics (to make dentures), orthodontics, restorative dentistry, dental implantology and oral and maxillofacial surgery.: 136-137 Rigidity-Inelastic (rigid) impression materials are used with patients with shallow undercuts.
