Ch. 39 Digestive and Excretory System - E Hobby Portfolio

Last Modified Date: August 06, 2020. The digestive system and excretory system are two bodily systems with seemingly unrelated functions: that of breaking down food for energy and that of removing waste from the body, respectively. There is, however, a good deal of overlap in the relationship between the digestive system and excretory system.

What Is the Relationship between the Digestive System and ...

The digestive system processes food into nutrients for cells, while the excretory system removes unwanted waste products from the body. All animals require some sort of food source to survive. Whatever the food source, it is broken down in the body by acid and enzymes within the digestive system, and the resulting nutrients are absorbed into the body.
