**Domestic Heating Design Guide**  
Heating: Beginner's Guide. ... The starting point for any heating system design is two-fold. ... The amount of heat it can produce is measured in kW, and typically boilers range in size from 15 to 40kW for domestic applications. It usually incorporates a pump to feed the water through pipes to the radiators.

**Heating: Beginner's Guide | Homebuilding**  
The first two are completely obsolete in domestic heating and only rarely encountered. The other two are commonplace. Recent changes to the Building Regulations have made semi-gravity non-compliant, so fully pumped is the only layout currently suitable for new installations.

**Central heating diagram - Mike the Bollerman**  
The first two are completely obsolete in domestic heating and commissioning of: • conventional means of providing primary and secondary space heating, domestic hot water, mechanical ventilation, comfort cooling and internal and external lighting • low carbon generation of heat by heat pumps, solar thermal panels, and micro-combined heat and power systems.

**Domestic Building Services Compliance Guide**  
normal domestic water pressure. As a result, domestic hot water uses always take precedence. The Closed System This approach utilizes a dedicated heat source for the radiant floor. The fluid in a closed system is re-circulated around and around in a completely closed loop. There is no connect-ion whatsoever to the domestic water supply.
