Endoleaks And Endotension Current Consensus

It is generally agreed that endoleaks and endotension are issues that are encountered fairly often, but uncertainty persists as to their importance in individual patients. Are they the Achilles' heel of the procedure, or of little consequence in the eventual clinical outcome of EVAR?

Endoleaks And Endotension Current Consensus On Their ...

That endoleaks and endotension are critically important complications of many EVARs is widely but not universally agreed. However, many aspects of the nature, incidence, and significance of these problems are highly controversial.

Nature and significance of endoleaks and endotension ...

That endoleaks and endotension are critically important complications of many EVARs is widely but not universally agreed. However, many aspects of the nature, incidence, and significance of these problems are highly controversial. Some investigators believe that most endoleaks do not influence the outcome of EVARs, 13.

Nature and significance of endoleaks and endotension ...

There are 5 types of endoleaks, each with different causes and treatment options. A Type I endoleak occurs when there is a gap between the graft and the vessel wall at "seal zones." The gap allows blood to flow along the side of the graft into the aneurysm sac, which creates pressure within the sac and increases the risk of sac rupture.

Endoleak Following AAA Repair - Endovascular Today

The current consensus is that one should treat a persistent EL2 when they are associated with a significant sac size increase, commonly considered as at least 5 mm over 6 months [37]. In the absence of an enlarging sac size, patients with type 2 endoleak should be kept under follow-up imaging by CTA or US based on standard local protocols.

Type II Endoleaks After EVAR - Endovascular Today

Type 3 endoleaks occur when there is a structural failure with the stent graft. Structural failures include holes in the stent graft fabric, stent graft fractures, and junctional separations that can occur with modular devices. Type 3 endoleaks will probably become more common as stent grafts that have been implanted begin to age and long-term follow up on these patients is accrued.

Imaging modalities for the detection and management of ...

Endotension, also referred to as a type V endoleak, is not a true leak but is defined as continued expansion of the aneurysm sac greater than 5 mm, without radiographic evidence of a leak site. Pathology. It is a poorly understood phenomenon but thought to be formation of a transudate due to ultrafiltration of blood by the graft membrane or unidentified leak below the resolution of imaging.

Endotension | Radiology Reference Article | Radiopaedia.org

If we were still unable to reach a consensus, the endoleak would be classified as FastE and managed as such. Any endoleak detected after the first postoperative CT scan was defined as a late endoleak. An endoleak was defined as persistent if it required reintervention, or if it was present in the last postoperative CT scan.
