Now you can make this easier and filter out the irrelevant results. Restrict your search results using the search tools to find only free Google eBooks.

### **Excel 2013 Powerpivot Y Dax**

The ability to easily reference complete tables and columns is a new feature in Power Pivot. DAX provides new lookup functions that are similar to the array and vector lookup functions in Excel. However, the DAX functions require that a relationship is established between the tables. The data in a column is expected to always be of the same data type.

DAX stands for Data Analysis Expression and is the name of the language that PowerPivot for Excel 2013 uses to create calculations between the columns (fields) in your Excel Data Model. Fortunately, creating a calculation with DAX is more like creating an Excel formula that uses a built-in function than it is like using a programming language such as VBA or HTML.

Measures, also known as measures in Power Pivot in Excel 2013, are calculations used in data analysis. Examples commonly found in business reports include sums, averages, minimum or maximum values, counts, or more advanced calculations that you create using a Data Analysis Expressions (DAX) formula. In a PivotTable, PivotChart, or report, a measure is placed in the VALUES area, where the row and column labels that surround it determine the context of the value.
