This manual explains how to boot the Fedora installation program, Anaconda, and how to install Fedora 30 on 32 and 64-bit AMD and Intel systems. It also covers advanced installation methods such as automated Kickstart installations, booting the installation from a network location, remote access to the installation system using VNC, and system upgrades from previous versions of Fedora.

Installation Guide :: Fedora Docs

In most other installers for both Linux and other operating systems, disk partitioning usually takes a "bottom-up" approach. In these installers, you first create underlying devices such as LVM physical volumes, then you create a layout such as LVM on top of them, then you create file systems on top of logical volumes, and the last step is usually assigning a mount point to each volume as needed.
