Fish As Fertilizer Mark L Kuhlmann Answers

How is Fish Fertilizer Made? Fish fertilizer is made from whole fish and carcass products, including bones, scales and skin. Rather than let unusable fish products go to waste, these items are converted into nutrients for the garden. Different types of fish, such as menhaden and anchovies, are ground into a slurry. This product is then processed to remove oils and fish meal, which are used for other industries. The liquid that remains after processing is fish emulsion.

All You Need to Know About Fish Fertilizer

Fish meal is a byproduct of the production of fish oils. This is produced by cooking and pressing fish, then drying and grinding the meat and bone. While it's not composted, this fish meal fertilizer is often used as a soil amendment. Available in compressed
