In physics, a free surface is the surface of a fluid that is subject to zero parallel shear stress, such as the interface between two homogeneous fluids, for example liquid water and the air in the Earth's atmosphere. Unlike liquids, gases cannot form a free surface on their own. Fluidized/liquified solids, including slurries, granular materials, and powders may form a free surface. A liquid in a gravitational field will form a free surface if unconfined from above. Under mechanical equilibrium

Free Surface Chemistry PowerPoint Templates. The surface chemistry is the whole bunch study of physical phenomena occurring inside the chemical world. The major branches of surface include adsorption, catalysis, colloids, and emulsions. At first, we will look at the mechanism, types, and applications of the adsorption theory of surface chemistry. Then comes the catalysis part where we look at homo and heterogeneous, shape-selective, and enzyme catalysis.
