ArcGIS Diagrammer is a productivity tool for GIS professionals to create, edit or analyze geodatabase schema. Schema is presented as editable graphics in an environment familiar to users of Microsoft Visual Studio. Essentially ArcGIS Diagrammer is a visual editor for ESRI's xml workspace documents that can be created in ArcMap or ArcCatalog.

ArcGIS Diagrammer for 10.1
At the ArcGIS data models Web site (https://support.esri.com/datamodels), a series of diagrams is used to represent the key design concepts and document the specifications of geodatabase elements, metadata, and map layers in each of the data model templates. This section provides a short overview for how various geodatabase elements are presented at the Web site and may be helpful as you document your own designs.

Documenting your geodatabase design—ArcMap | Documentation
Esri are encouraging users to use the Geodatabase modelling capabilities in Enterprise Architect (EA). While I can appreciate EA is really good (I'm a user) ArcGIS Diagrammer was a simple no frills tool that did a job and did it well. So I'm sorry to see it fall by the way side. But there is a work around to get it running!
