Solved: Obtain the normal modes of vibration for the ...

$I_x = I_y = \frac{1}{2} M a^2$ We can use the parallel axis theorem to find the principal moments of inertia about the center of mass. The center of mass is $Z = \frac{1}{M} \int \rho(x, y) x dx dy = \frac{1}{M} \int_0^a \int_0^a \rho (a - x) dx dy = \frac{1}{M} \int_0^a (a - x) dx = \frac{1}{M} (ax - \frac{1}{2} x^2) \Big|_0^a = \frac{1}{M} (a^2 - \frac{1}{2} a^2) = \frac{1}{2} a$
From symmetry we can tell that the center of mass is $(\frac{1}{2} a, \frac{1}{2} a)$.
