Convex Optimization – Boyd and Vandenberghe. Convex Optimization. Stephen Boyd and Lieven Vandenberghe. Cambridge University Press. A MOOC on convex optimization, CVX101, was run from 1/21/14 to 3/14/14. If you register for it, you can access all the course materials. More material can be found at the web sites for EE364A (Stanford) or EE236B (UCLA), and our own web pages.

Convex Optimization - Boyd and Vandenberghe

applications of convex optimization are still waiting to be discovered. There are great advantages to recognizing or formulating a problem as a convex optimization problem. The most basic advantage is that the problem can then be solved, very reliably and efficiently, using interior-point methods or other special methods for convex optimization.

2 Convex sets Let c_1 be a vector in the plane defined by a_1 and a_2 , and orthogonal to a_2 . For example, we can take $c_1 = a_1 - \frac{a_1 \cdot a_2}{\|a_2\|^2} a_2$. Then $x \in S_2$ if and only if $\exists c_1 \in S_1$ such that $x = c_1 + \lambda a_2$. Similarly, let c_2 be a vector in the plane defined by a_1 and a_2 , and orthogonal to a_1 , e.g., $c_2 = a_2 - \frac{a_2 \cdot a_1}{\|a_1\|^2} a_1$. Then $x \in S_3$ if and only if $\exists c_2 \in S_2$ such that $x = c_2 + \mu a_1$. Putting it all ...
