While staying up-to-date on standards, manuals, guidelines, policies, and specifications can be challenging, the Hoyle, Tanner design teams have welcomed the Second Edition Guidelines for Geometric Design of Low-Volume Roads (Guidelines) recently published by the American Association of State Highway and Transportation Officials . The updated guidelines expand the definition of low-volume which provides greater flexibility to Hoyle, Tanner's engineers to design the appropriate solution for ...

First published in 2001, AASHTO's guidelines aim to help highway engineers select appropriate geometric designs for local and collector roads with low daily traffic volumes. AASHTO said the first edition of its low-volume guidelines addressed the design needs of roads carrying average daily traffic volumes of 400 vehicles per day or less. The new second edition of its low-volume road guidance not only replaces the first edition but also includes design advice for local and minor collector ...

Geometric Design Guidelines for Very Low-Volume Roads (ADT  $\leq 400$ ) (1) defines the needs of these roadways and the criteria to meet those needs. When defined as a low-volume roadway, this design guideline may be used in place of guidelines defined in the recent G Book, A Policy on Geometric Design of Highways and Streets (PGDHS) (2), if applicable.

The geometric design of facilities designated as low volume presents unique challenges to engineers across the United States. These roadways, designated by low traffic volumes thus reduced frequency of crashes, require the use of design principles unlike those applied to higher volume roads.
