Hodgkin And Non Hodgkin Lymphoma

A doctor can tell the difference between Hodgkin's lymphoma and non-Hodgkin's lymphoma by examining the cancer cells under a microscope. If in examining the cells, the doctor detects the presence of a specific type of abnormal cell called a Reed-Sternberg cell, the lymphoma is classified as Hodgkin's. If the Reed-Sternberg cell is not present, the lymphoma is classified as non-Hodgkin's.

Hodgkin's vs. non-Hodgkin's lymphoma: What's the ...

The distinction between Hodgkin's disease and non-Hodgkin's lymphoma is made upon examination of the cancer cells (from a biopsy or aspiration of the tumor tissue). The type of abnormal cells identified in the sample determines whether a lymphoma is classified as Hodgkin's disease or non-Hodgkin's lymphoma.

Hodgkin's and Non-Hodgkin's Lymphoma: Prognosis and Stages

In non-Hodgkin's lymphoma, tumors develop from lymphocytes — a type of white blood cell. Non-Hodgkin's lymphoma is more common than the other general type of lymphoma — Hodgkin lymphoma. Many different subtypes of non-Hodgkin's lymphoma exist. Diffuse large B-cell lymphoma and follicular lymphoma are among the most common subtypes.

Non-Hodgkin's lymphoma - Symptoms and causes - Mayo Clinic

Non-Hodgkin lymphoma (also known as non-Hodgkin's lymphoma, NHL, or sometimes just lymphoma) is a cancer that starts in white blood cells called lymphocytes, which are part of the body's immune system. NHL is a term that's used for many different types of lymphoma that all share some of the same characteristics.

What Is Non-Hodgkin Lymphoma? - American Cancer Society

After a diagnosis on non-Hodgkin's lymphoma, your doctor will tell you the stage of your cancer. Learn more about what each stage means and the treatments that may be right for you.

Non-Hodgkin's Lymphoma Stages and Prognosis

The difference between Hodgkin lymphoma and Non-Hodgkin lymphoma is that the cancer develops in different lymphocytes. If a specific type of abnormal cell called a Reed-Sternberg cell is detected, the lymphoma is classified as Hodgkin's. Non-Hodgkin lymphoma can begin in B lymphocytes (also called B cells), T lymphocytes, or natural killer cells.

Hodgkin's vs. Non-Hodgkin's Lymphoma: Symptoms, Treatment ...

Non-Hodgkin lymphoma (NHL) is a group of blood cancers that includes all types of lymphomas except Hodgkin lymphomas. Symptoms include enlarged lymph nodes, fever, night sweats, weight loss and tiredness. Other symptoms may include bone pain, chest pain or itchiness. Some forms are slow-growing, while others are fast-growing. Lymphomas are types of cancer that develop from lymphocytes, a type ...

Non-Hodgkin lymphoma - Wikipedia

Non-Hodgkin lymphoma can cause lymph nodes to become enlarged. Enlarged lymph nodes close to the surface of the body (such as on the sides of the neck, in the groin or underarm areas, or above the collar bone), may be seen or felt as lumps under the skin.

Signs and Symptoms of Non-Hodgkin Lymphoma

Non-Hodgkin lymphoma (NHL) is generally divided into 2 main types, based on whether it starts in B lymphocytes (B cells) or T lymphocytes (T cells). There are many different types of B-cell lymphomas. Treatment usually depends both on the type of lymphoma and the stage (extent) of the disease, but many other factors can be important as well.

Treating B-Cell Non-Hodgkin Lymphoma

Hodgkin's lymphoma is one of two common types of cancers of the lymphatic system. The other type, non-Hodgkin's lymphoma, is far more common. Advances in diagnosis and treatment of Hodgkin's lymphoma have helped give people with this disease the chance for a full recovery. The prognosis continues to improve for people with Hodgkin's lymphoma.

Hodgkin's lymphoma (Hodgkin's disease) - Symptoms and ...

Non-Hodgkin's lymphoma is a group of cancers that start in lymphocytes -- your immune system's infection-fighting white blood cells.Doctors divide it into types based on the kind of lymphocyte ...

Types of Non-Hodgkin's Lymphoma - WebMD

Medical professionals are able to distinguish non-Hodgkin's from Hodgkin's lymphoma (formerly referred to as Hodgkin's disease) by examining the white blood cells affected by the disease. If the doctor does not detect what is known as a Reed-Sternberg cell, the lymphoma is classified as non-Hodgkin's.

Hodgkin's vs. Non-Hodgkin's Lymphoma: What's the ...

If your non-Hodgkin's lymphoma is aggressive or causes signs and symptoms, your doctor may recommend treatment. Options may include: Chemotherapy. Chemotherapy is a drug treatment — given orally or by injection — that kills cancer cells. Chemotherapy drugs can be given alone, in combination with other chemotherapy drugs or combined with ...
