Robert Winston (Author of Human Instinct)

The biological theory of human instincts. From a biological standpoint, human instincts are blueprints for behavior that are hereditary and common across the species. The purpose of these instincts is to help people adapt to their environments. They're pre-programmed in the brain itself. These instincts allow you to protect yourself and keep yourself alive.

The ABCs of Human Instincts - Exploring your mind

A primitive reflex is displayed by normal human infants and not neurologically intact adults. Some examples include the Palmar grasp reflex, which is the tendency for babies to close their hand around anything that strokes the palm. The swimming reflex

How our primeval impulses shape our modern lives. From caveman to modern man ...Few people doubt that humans are descended from the apes; fewer still consider, let alone accept, the psychological implications. But in truth, man not only looks, moves and breathes like an ape, he also thinks like one. Sexual drive, survival, competition, aggression - all of our impulses are driven by our human instincts.

Human Instinct by Robert Winston - Penguin Books New Zealand

It is back in our primeval past that we find the first clues to the understanding of our human "But how well do instincts equip us for the twenty-first century? Do instincts help or hinder us as we deal with large anonymous cities, low-level stress, the battle of the sexes and the fracturing of communal life?"

Human Instinct - DocuWiki

Whether we know it or not, our daily lives are shaped by powerful currents of instinct. The conscious and unconscious decisions we all make are deeply affected by an ancient genetic program: our ambition and lust, our drives to compete and cooperate are essential components of the human mind, forged among our ancestors on the African savannah.
