Complex systems are systems that are difficult to model and predict. The amount of information required to fully document a complex system at a point in time is prohibitively large such that they can't be fully modeled by any known methods.

engineering, it is important to define systems themselves. The systems with which a systems engineer is concerned are first of all man-made. Second, they are large and complex; their component parts interact so extensively that a change in one part is likely to affect many others.
