Information Theory And Reliable Communication

Information Theory and Reliable
Communication delves into the
mathematical models of sources and
channels in communication systems and
then explores the framework for
constructing highly-detailed models of
real-world sources and channels. The
text then extends further into
information theory by breaking encoders
and decoders into two parts and
studying the mechanisms that make
more effective communication systems.

quantification, storage, and
communication of information. It was
originally proposed by Claude Shannon
in 1948 to find fundamental limits on
signal processing and communication
operations such as data compression, in
a landmark paper titled "A Mathematical
