Internal Combustion Engine Definition

Definition of internal combustion engine : a heat engine in which the combustion that generates the heat takes place inside the engine proper instead of in a furnace Examples of internal combustion engine in a Sentence

Internal Combustion Engine | Definition of Internal ...

Internal-combustion engine, any of a group of devices in which the reactants of combustion (oxidizer and fuel) and the products of combustion serve as the working fluids of the engine. Such an engine gains its energy from heat released during the combustion of the nonreacted working fluids, the oxidizer-fuel mixture.

internal-combustion engine | Definition & Facts | Britannica

An internal combustion engine is an engine that creates its energy by burning fuel inside itself. Most cars have internal combustion engines. A typical internal combustion engine harnesses only a quarter of the specific energy of gasoline.

Internal combustion engine definition and meaning ...

An internal combustion engine (ICE) is a heat engine in which the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

Most engines use a fixed compression ratio, however a variable compression ratio engine is able to adjust the compression ratio while the engine is in operation. The first production engine with a variable compression ratio was introduced in 2019. Variable compression ratio is a technology to adjust the compression ratio of an internal combustion engine while the engine is in operation. This ...
