Probability is starting with an animal, and figuring out what footprints it will make. Statistics is seeing a footprint, and guessing the animal. Probability is straightforward: you have the bear. Measure the foot size, the leg length, and you can deduce the footprints.

A Brief Introduction to Probability & Statistics ...

A probability of zero is a result which cannot ever occur: the probability of getting five heads in four flips is zero. A probability of one represents certainty: if you flip a coin, the probability you'll get heads or tails is one (assuming it can't land on the rim, fall into a black hole, or some such).
