The legality of Library Genesis has been in question since 2015 because it allegedly grants access to pirated copies of books and paywalled articles, but the site remains standing and open to the public.

### Kala Azar In South Asia

Visceral leishmaniasis (VL), (also known as black fever or Kala-azar) is a life-threatening disease first reported from the Indian subcontinent. VL ranks as the world’s second largest parasitic disease killer and is a neglected tropical disease. Most of those infected by this life-threatening disease are uneducated daily wagers working to support their families, and vectors easily disseminate the disease to their neighbors.

Kala-azar is caused by a parasite, Leishmania donovani. Recent review indicates that worldwide 98 countries are endemic for kala-azar. Approximately 0.2-0.4 million new VL cases occur each year worldwide. 90% of global VL cases occur in Bangladesh, Brazil, Ethiopia, India, South Sudan,

### Elimination of Kala-Azar from the Southeast Asia Region.

The preparatory phase for the elimination of kala-azar from South-East Asia is nearing completion. The emphasis is now on the attack phase which will focus on the endemic villages and through the primary health-care units. This will include actively finding kala-azar cases and performing rapid point-of-care diagnosis and treatment with a single dose of liposomal amphotericin B at the primary health-care unit.

Kala azar in India refers to the special circumstances of the disease kala azar as it exists in India. Kala azar is a major health problem in India with an estimated 146,700 new cases per year as of 2012. In the disease a parasite causes sickness after migrating to internal organs such as the liver, spleen and bone marrow. If left untreated the disease almost always results in the death. Signs and symptoms include fever, weight loss, fatigue, anemia, and substantial swelling of the liver and spl

Since 1990, South Asia has experienced a resurgence of kala-azar (visceral leishmaniasis). To determine risk factors for kala-azar, we performed cross-sectional surveys over a 3-year period in a Bangladeshi community. By history, active case detection, and serologic screening, 155 of 2,356 residents had kala-azar with onset from 2000 to 2003.
