Belts, Fan and Accessory Drive - Oshkosh Equipment

Inspect Engine Belts Why Engine Belts Are Important Engine belts transfer rotational power from the crankshaft to the pulleys (sheaves) that drive the engine coolant circulating pump, one or more alternators and often the raw water pump. If the belt on the circulating pump fails, the engine cannot be operated. (If the raw water pump belt fails it may still be possible to rig up a

Inspect Engine Belts - MARINE DIESEL BASICS

Simply release the tension on the belt from the tensioner, and then the belt should simply slide off. Release the tension, and then you should be able to unwind the belt from the engine. The belt should be able to be maneuvered around and through the fan - you do not need to remove the fan to swap out any of the belts .

How Do I Prevent Belt Failure? Our common recommended interval for preventative serpentine belt and pulley replacement is 80,000 to 100,000 miles. On the late model BMW "N" family 6-cylinder engines (N51, N52, N54, N55), we recommend 60,000 mile belt and pulley replacement, or sooner, if inspection shows ANY belt or pulley wear. Here's why:

BMW N51, N52, N54, N55 6-Cylinder Sepentine Belt Failure ...

With your engine cold and turned OFF, inspect your drive belts for wear. The belts should be free from cracks, fraying, glazing and missing chunks. Replace belts if any of the previously mentioned issues are present or every four years. In this article, I'll go over the steps involved with replacing the drive belts on the M54 6-cylinder engine.
