The DRP series are 100% oil-less piston type vacuum pumps. They are designed to operate on a continuous basis at any point from atmospheric pressure to the pumps' ultimate vacuum level of 27.5"Hg (DRPS) & 29.5"Hg (DRPC). They are ideal for applications where oil or water sealed pumps are objectionable.

U.S. VACUUM LRV/NC pumps are single stage close-coupled liquid ring vacuum pumps capable of producing a vacuum to 28.3" Hg. The pumps are available in various materials of construction (FS = Iron/Stainless steel, SS = All stainless steel). These are the preferred type of vacuum pump used in process applications where heavy flows of condensable vapors (water, steam, alcohols, solvents, etc) are present.

Precision machined one-stage pump removes moisture from air conditioning systems to safely add refrigerant. This one stage vacuum pump is ideal for automotive air conditioning, HVAC work and other operations that require high vacuum pull from a compact pump. One stage pump draws vacuum down to 75 micron. Durable die cast aluminum housing and convenient top handle for easy maneuvering.

U.S. Vacuum Pumps LRH series Liquid ring Vacuum Pumps are durable Two Stage pumps having pumping speeds which range from 45-1000 CFM with vacuum capabilities to approximately 29" Hg. When the pump is operating, a continuous flow of seal liquid is entering the pump and forms a seal between the impeller and casing.

LRH SERIES - Closte

When the pumps are on, the ejector pump actually uses more energy than the mechanical, however most vacuum applications

Read Free Manual Us Vacuum Pumps

are intermittent- suction and release- and the ejector pump can follow that cycle and be switched off and on easily along with the cycle which in total gives a much lower energy consumption compared to the mechanical pump that is on all the time.
