The marine radar transmits microwave energy that has the potential to be harmful to humans and animals. Before beginning radar transmission, verify that the area around the radar is clear. The radar transmits a beam approximately 12° above and below a line extending horizontally from the center of the radar.

Amazon.com: Radar Systems: Electronics

For the techies among us, here is a simple formula: $(1.22 \text{ nautical miles} \times \text{square root of height of radar}) + (1.22 \text{ nautical miles} \times \text{square root height of target})$ In simple English, that means that if your boat has an antenna on a T-top that's nine feet off the water, and you're searching on the screen for a boat that's the same size, you'll need to be within 7.3 nautical miles $(1.22 \times 3 + 1.22 \times 3 = 7.32)$.
