A: A microstrip antenna, also called a patch antenna or printed antenna, is an antenna which is primarily a two-dimensional flat structure (Figure 6. In its simplest form, it uses a conducting "patch" one-half wavelength long, so that the metal surface acts as a resonator similarly to the half-wave dipole antennas.

### The Microstrip antenna, Part 1: Basics

The radiating element and feed lines are placed by the process of photo-etching on the dielectric material. Usually, the patch or microstrip is chosen to be square, circular or rectangular in shape for the ease of analysis and fabrication. The above shown is the image of a microstrip patch antenna. The length of the metal patch should be  $\lambda/2$ .
