Mental models are how we understand the world. Not only do they shape what we think and how we understand but they shape the connections and opportunities that we see. Mental models are how we simplify complexity, why we consider some things more relevant than others, and how we reason. A mental model is simply a representation of how something works.

Everyone inherently experiences some degree of subconscious bias in their thinking. Critical thinking skills can help an individual overcome these and separate out facts from opinions. The Watson Glaser critical thinking test is based around the RED model of critical thinking: • Recognize assumptions. This is all about comprehension.

### **What is the RED Model of Critical Thinking?**

All Thinking Is Defined by the Eight Elements That Make It Up. Eight basic structures are present in all thinking: Whenever we think, we think for a purpose within a point of view based on assumptions leading to implications and consequences.

Design at Stanford (d.school). d.school is the leading university when it comes to teaching Design Thinking. The five stages of Design Thinking, according to d.school, are as follows: Empathise, Define (the problem), Ideate, Prototype, and Test.

## **5 Stages in the Design Thinking Process | Interaction ...**

The purpose of a model is to take a complex, real-world situation and pare it down to the essentials. If designed well, a model can give the analyst a better understanding of the situation and any related problems. A good model is simple enough to be understood while complex enough to capture key information.

Critical thinking is that mode of thinking – about any subject, content, or problem — in which the thinker improves the quality of his or her thinking by skillfully taking charge of the structures inherent in thinking and imposing intellectual standards upon them. (Paul and Elder, 2001). The Paul-Elder framework has three components:

## **Paul-Elder Critical Thinking Framework — University of ...**

The critical thinking process is based on three main stages; observe the problem to build rational knowledge, ask questions to analyze and evaluate data, and find answers to the questions that can be formulated into a solution for the problem. These stages are translated into six steps (6 Steps for Effective Critical Thinking):
