Nikon, however, seems to love their old lenses as many of us do. Thus, on many modern, albeit higher-end Nikons, there exists a menu option in the SETUP Menu called Non-CPU Lens Data. If your camera has this, it means you can pair your old lenses and breath life back into them for use with your current body.

Non-CPU Lens Data

Rick, if you use AF lenses, which have predominated the market for 20+ years, there's probably no reason you'd encounter non-CPU lenses. However, for some of us that started with film long ago, we built up collections of manual lenses that had mechanical connections to the light meters in the old Nkormat, Nikon F, etc camera bodies.

The Nikon F-mount is a type of interchangeable lens mount developed by Nikon for its 35mm format single-lens reflex cameras. The F-mount was first introduced on the Nikon F camera in 1958, and features a three-lug bayonet mount with a 44 mm throat and a flange to focal plane distance of 46.5 mm. The company continues, with the 2020 D6 model, to use variations of the same lens mount ...
