Order of Operations Cross-Number Puzzle by All Things ...

And the multiplication cross \times is used only in scientific notation -- therefore the student will never see the following: $3 + 6 \times (5 + 3) \div 3 - 8$. Such a problem would be purely academic, which is to say, it is an exercise for its own sake, and is of no practical value. It leads nowhere. The order of operations is as follows:

Order of Operations for Solving Equations [10/12/1995] How would you multiply a question like this: $-2(x-y)^2$? Order Of Operations in Four Steps [02/15/1998] I need help figuring out what operation to do first. Prime Numbers [01/31/1997]

Math Forum - Ask Dr. Math Archives: Elementary Multiplication

When a vector is multiplied by a positive scalar (i.e., number), its magnitude is multiplied by the scalar and its direction remains unchanged (if the scalar is negative, the direction is reversed). The multiplication of a vector a by another vector b leads to the dot product, written $a \cdot b$, and the cross product, written $a \times b$.
