of free Kindle books to choose from, and the website couldn't be easier to use.

## **Paint Spray Booth Design Guide**

In crossdraft and semi-downdraft paint booths, the exhaust plenum is located at the rear of the spray booth. In side downdraft paint booths, filtered exhaust plenums are located on both sides of the spray booth. When air reaches the floor in downdraft paint booths, it is exhausted through a filtered exhaust pit. The pit may consist of one, two or three rows.

## **Understanding Key Components of Paint Booth Design**

Paint Booth Design The spray booth provides a safe, clean painting environment for a better quality finish and increased productivity. The needs of the application — what is being painted, how it is being painted and what coatings are being applied — determine the paint booth design.

## **Spray Booth Design - Finishing Academy**

Sizing spray paint booths. The spray paint booth size is directly related to its operational cost. Keep in mind that the fans and motors used for supply and exhaust are the greatest operational costs of a spray booth, which have a number of design options to consider.

## **Spray Booth Design Elements - Size - Paint Booths**

The paint spray booth is designed primarily to contain paint overspray. Overspray results when paint spray misses its target. Fine particles are suspended in the air-and if they are not controlled, they can cause damage. Overspray creates three main hazards which can be avoided if the paint booth is working correctly.

The size air conditioner you will need will depend on the size of the paint booth and the type of paint booth. There are two primary ways air flow is calculated in a paint booth. For a cross draft design paint booth air flow is calculated by the height and width of the booth x 100 feet per minute which gives you the CFM of the booth.
