The PANTONE Matching System (PMS) is the best known ink colour mixing system in the world today. It was designed to provide colour standardisation for the entire printing industry. It also provided an array of colours to graphic designers. The printer was able to reproduce these colours by mixing together two or more standard basic colours.

Plus, with this convenient chart, you could even print it out and show your customer the approximate Pantone options that you can quickly mix on the fly. By using a 50/50 ratio, a screen printer could even mix these colors without the need of a scale, though using a gram scale would make it easier and more accurate.

**Tips For Mixing Custom Inks Without A Pantone System ...**  
When the job goes to the press, the press operator finds that color (Pantone 199 Red) in their Pantone guide. There is a mixing formula in the guide (circled) for the press operator to follow. The press operator takes 12 oz. of Pantone Rubine Red ink, and 4 oz. of Pantone Yellow ink, and mixes them together.

Mixing colors in RGB mode on a computer is very different than mixing colors with paints, so my chart won't help much. For example, mixing pure red and pure green makes yellow in RGB. You can mix colors by inputting the values for Red Green and Blue. R79 G0 B0 will make a chocolate brown and R134 G70 B0 will make a brown that's more orange.

**Pantone to CMYK - Best Online Tool to Convert Pantone ...**  
The whole purpose of the Pantone Matching System (PMS) is to create predictable colors that can be created with mixed inks on a printing press. This way, designers, clients and printers can talk to each other and agree on a specific PMS color by simply looking at the color swatch books, picking a color (say PMS 300), and everyone knows it will actually be that color on the paper when printed.
