### Papoulis Circuits And Systems A

Athanasios Papoulis' classic text was the first to present digital techniques as an integral part of a unified course in system theory and design, rather than as a separate unit. The enduring success of Circuits and Systems undoubtedly is due in large part to the author's concentration on fundamental ideas explained in the context of simple illustrations.

In this paper, iterative procedures for band-limited signal extrapolation are considered. Specifically, we will show that the well-known Gerchberg-Papoulis algorithm [1], [2]:  $g_n = \text{sinc}\Omega * (g + (I - T)g_{n-1})$ , can be considered a special case of an iterative procedure given by Landweber in 1951 [3].
