Even the wisest philosophers have been left with a huge question mark upon studying and debating these major theories. The reality is that there are many mysteries about the universe that physicists and astronomers will never be able to solve. The following fifteen questions are among the top unanswered questions to think about. 15.

15 Questions About The Universe That Might Never Be Answered

Until the 1920s, scientists believed that the universe was stationary. Then researchers discovered that the universe is, in fact, expanding: Galaxies are traveling away from one another. Thus, until one moment some 15 billion years ago, all galaxies were located at the same point. This was the big bang, the origin of the universe.

Questioning the Universe Free Summary by Stephen Hawking

1. Are we the most advanced form of life in the universe? Or are there other, far more superior life forms out there? 2. Is time only a concept made by humans? Is it something we restrict ourselves with? 3. Why do we all fear death? 4. What is consciousness? And are we sure we are the only ones capable of it?
