The first thing to look out for is a correctly modeled double number line. It will be important that students label each number line with the appropriate unit and that they keep the hash marks vertically aligned. Also, students should label the first hash mark on the far left of each number line with 0.

Unit Rates for Ratios of Fractions on a Double Number Line

Big Ideas: A unit rate is a rate where the second quantity is 1. Unit rates make it easy to make comparisons between two different rates. Double number lines are an effective tool for finding unit rates and comparing rates.

The diagram can, for example, be read as showing a move along a number line from 0 to 12, in 8 skips of 1.5 units (with line A representing the number of skips and line B the distance skipped); in other words the diagram can also be interpreted as showing repeated addition. Scales on a map are well known examples of double number lines.
