Section Summary. The Earth has terrestrial biomes and aquatic biomes. Aquatic biomes include both freshwater and marine environments. There are eight major terrestrial biomes: tropical wet forests, savannas, subtropical deserts, chaparral, temperate grasslands, temperate forests, boreal forests, and Arctic tundra.

## **Terrestrial Biomes | Biology II - Lumen Learning**

There are terrestrial biomes (land) and aquatic biomes, both freshwater and marine. Would you like to know what the weather is like in different biomes around the world? How about the types of plants and animals that live in these biomes? Here you will find all sorts of information about the world's biomes.

## **NCEAS Kids Do Ecology - KDE Santa Barbara**

Freshwater Aquatic Biomes have close ties to their surrounding terrestrial biomes. Runoff of water from land creates streams and rivers, and where runoff is trapped, ponds and lakes are formed. Also, the characteristics of a freshwater biome are influenced by the pattern and speed of water flow, as well as the climate to which the biome is exposed.

## **What are Terrestrial and Aquatic Biomes? | Yahoo Answers**

Biomes •Plants in a particular biome have characteristics, specialized structures, or adaptations that allow them to survive in that biome. –Adaptations like size, shape, & color •Ex.) Plants
