Thirty-five years after its first publication, The Flow of Complex Mixtures in Pipes remains a fundamental resource for researchers and practicing engineers alike. Authors George W. Govier and Khalid Aziz present a unified approach to all types of complex flows in pipes, beginning with the underlying fundamentals and concluding with recommended design methods.

Drag Reduction of Complex Mixtures discusses the concept of drag reduction phenomena in complex mixtures in internal and external flows that are shown experimentally by dividing flow

patterns into three categories. The book is intended to support further experiments or analysis in drag reduction. As accurately modeling flow behavior with drag reduction is always complex, and since drag ...

Special attention is therefore focused on three aspects of the flow of these complex mixtures. (1) The flow patterns. (2) The hold-up of the individual phases and their relative velocities. (3) The relationship between pressure gradient in a pipe and the flowrates and physical properties of the phases.

The complex mixture of hydrocarbon compounds or components can exist as a single-phase liquid, a single-phase gas, or as a multiphase mixture, depending on its pressure, temperature, and the composition of the mixture. The fluid flow in pipelines is divided into three categories based on the fluid phase condition:

flow behavior of these crudes by heating is required to be handled in pipelines. The aim, of this work was to indenti\$' the theological behavior of Wafra high viscosity Saudi crude oil at different temperatures. Different correlations were also applied to investigate the variation in viscosity temperatures. 2. Literature Review
