important to know that there are several welding processes that can be used:

GTAW/TIG welding; GMAW/MIG welding; GTAW/TIG. Gas tungsten arc welding (GTAW), also known as tungsten inert gas (TIG) welding, is one of the most popular welding processes chosen for aluminum. This welding technique is often used by automotive enthusiasts

One of the most popular welding processes for aluminum is gas tungsten arc welding (GTAW), otherwise known as tungsten inert gas (TIG) welding. GTAW is a great process for aluminum because it does not require mechanical wire feeding, which can create feedability issues.

As the filler material and aluminum base metal become liquid during the welding process, they absorb hydrogen and can hold it in solution. Once the molten material starts to solidify, it can't hold the hydrogen in a homogenous mixture anymore.

**Aluminum [Guide]**

However, welding aluminum presents some challenges, from controlling heat input to dealing with the oxide layer.

Gas tungsten arc welding (GTAW) has traditionally been considered the go-to process for welding aluminum because of the high weld integrity and aesthetic appearance the process provides.
