Volkswagen's TDI engine is a turbo direct injection four-cylinder engine and has been used by Volkswagen for over 25 years on a variety of models, both front- and rear-wheel drive. The timing marks on the Volkswagen TDI 1.9-liter diesel indicate when the engine is at top-dead-center, or TDC. TDC is when the No. 1 piston is completing its compression stroke, which is the measure by which the engine is timed.

The manufacturer of an engine does recommend certain timing, which is the timing they set it at when the engine is first made. This timing is usually balanced to get as much power as possible, while still remaining in legal limits for emissions. Adjusting injection timing is also often referred to as spill timing. Why Adjust Injection Timing? Usually, injection timing is adjusted to create more power in the engine. Timing can be advanced to create more power.
