Kinematics of
Rotational Motion
about a Fixed Point.
We all know that
rotational motion and
translational motion
are analogous to each
other. In rotational
motion, the angular
velocity is ω which is
analogous to the linear
velocity v in the
translational motion. Let
us discuss further the
kinematics of rotational

**The MileLion | Travel
Better for Less**

When looking at average acceleration, we will always consider two points in time. So we will take arbitrary points A and B along the path, in which the car travels through A to B. We will assume that at point A 10 seconds have passed and the car is traveling 20 m/s, and at B 30 seconds have passed and the car is traveling

acceleration times the
time. • Example: A car
having an initial
velocity of 10 m/s
accelerates at 5 m/s².
After 1 second its
speed is 15 m/s, after 2
seconds its speed will
be 20 m/s, and so on. •
Based on this example,
it follows that the
